

# MAGNI 109

*Magni 109 is a chrome-free, high performance coating system engineered for brake rotors. This inorganic, metallic film contains proven corrosion inhibitors in a single, thin layer.*

*Magni 109 provides superior product performance by protecting against under-vehicle corrosion. Since Magni 109 has frictional output similar to a bare rotor, it can be applied to all braking surfaces, and overspray is permissible to reduce application costs. It will not ball up during brake application and reduces warranty costs related to brake pedal pulsation. Coated rotors are easily removed for service, protecting delicate and expensive anti-lock brake system parts.*

*Magni 109 is available in light and dark gray, and can be applied via spray or dip/spin application methods.*

## Performance Data:

Salt Spray <small>ASTM B117</small>	400 Hours
Coating Thickness	15-20 microns

## Specifications:

General Motors	GM273M
Delphi	DM7563
Arvin Meritor	P55
Webb Wheel	ES-210
Chrysler	MS10783
